

isoKIT

A procedure based software platform to cover your business standards

isoKIT System

What is isoKIT

isoKIT is a software platform that provides modular definable/customizable sections with relational data sources and a workflow engine to cover information flows in your organization based on your requirement or any international standard (ISO).

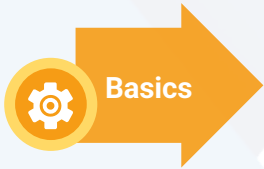

isoKIT also includes a built-in form generator and report generator to facilitate workforce and provide insights in business layer.

With isoKIT you can easily create your very own version of a unified software platform to handle your systematic matters and put your efforts on other half of your business.

isoKIT Implementation

Simple implementation through pre-loaded wizards

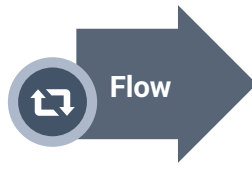

Define basics

Stakeholders, roles,
Permissions, currencies,
languages, graphic themes
